GENERAL CLEANING

Convex Security Mirrors recommend cleaning their stainless steel mirror faces with soap and water and then with a clean, soft, lint free, damp cloth.

Convex Security Mirrors do NOT recommend using a commercial Stainless Steel Polish as the protective layer will leave a residue on the highly polished mirror face. Rubbing plain white flour on a dry stainless steel mirror face with a dry cloth will polish the mirror to its original brilliance.

DO NOT USE:

- abrasives
- acids

GRAFFITI REMOVAL

Any graffiti should be removed from the mirror face as soon as possible and preferably within 24 hours with a suitable lacquer thinners. Not all graffiti cleaning agents are suitable. Failure to use an approved cleaning agent may damage the mirror surface.
